

CableNet launches New Suite of Data Centre Courses

Following the tremendous success of their Practical Data Centre Design training programme, delivered both in the UK and the Middle East, CableNet Training have reacted to continued demand for further data centre knowledge, and are launching a suite of complementary courses designed to expand delegates' skills even further from design through to ongoing operational management.

The current 3-day course provides the necessary skills to allow communications professionals to competently understand all the complex design issues surrounding the data centre environment and to be able to produce accurate design requirements for data centres. However, delegate feedback has prompted CableNet's development team to launch a suite of three further 1-day courses to meet market demand for extensions to this core course.

Entitled:

- Practical Data Centre Management
- Advanced Data Centre Power
- Advanced Centre HVAC

Two of the new courses (Advanced Data Centre Power and Advanced Data Centre HVAC) provide more comprehensive knowledge of subjects covered on the 3-day Data Centre programme, whilst the third (Practical Data Centre Management) provides a thorough insight into the complex area of managing the data centre post hand-over.

Andrew Stevens, CableNet Training's Managing Director comments, "The success of our original Data Centre Design programme far exceeded our expectations and, by listening to our clients, we realised an urgent need for further add-on courses. We decided to develop the third course using Square Mile Systems as we found there was limited public material on best practice data centre management".

David Cuthbertson, Square Mile System's Managing Director added "Many organisations are realising that the most critical part of their IT infrastructure is being managed by teams who have never been able to source specific training for their needs. In conjunction with the design courses, the day on management practices will provide the extra knowledge needed to make the data centre deliver what it was designed for".

Each of the new courses deliver more essential knowledge to allow delegates to combine their skills to demonstrate a greater understanding of the many complex areas involved with Data Centre Design and Management.

Editors Notes:

CableNet Training is the leading provider of telecommunications training in the EMEA region, specialising in Data Centres, Wireless, Fibre Optic, IP Security, IP Convergence and Networking. We deliver technical training courses which are approved and accredited by the UK leading bodies and associations such as BTEC, City & Guilds, BICSI, CITA and FIA, in addition we deliver a large number of vendor specific accreditation.

Square Mile Systems is a private UK company specialising in developing and delivering management software and techniques covering data centre infrastructure. Combining asset and configuration management across data centre technologies as diverse as power, cabling, hardware, storage, software and services, we enable improved operational and project processes in complex environments. As an industry leader on optimising delivery of IT service, Square Mile Systems is a regular speaker at events held by the BCS, ITSMF, FAST, IOD and BICSI on applying best practices.
