

IT Infrastructure Documentation Made Easy

28th February 2012

In our free half day workshop we'll be covering how to automate the maintenance of multiple infrastructure diagrams and spreadsheets. We'll cover Visio automation techniques and how to reduce the numbers of documents to maintain. The end results are increased productivity of IT teams, faster delivery of projects, reduced costs of change and improved risk assessment.

We'll show you how to increase the quality and accuracy of infrastructure documentation by using best practices and leading edge toolsets.

Our case studies and examples will cover:

- How CMDB data can be used to create Visio service and dependency diagrams
- Automated updates of inventory, asset and connectivity spreadsheets
- Overnight updates of Visio rack diagrams and data centre floor plans
- Maintaining LAN/SAN diagrams across multiple locations
- Technical and service impact analysis of network and power changes
- Using Visio as a dashboard for data centre power and space usage
- Application dependencies and change risks in virtualised infrastructures
- Updating design, project and operational documents in one go
- Identifying single points of failure at all levels using reports and diagrams
- Using Visio diagrams as a "portal" to other documentation systems and information.
- Efficient ways to capture data covering inventory, cabling, applications, ITIL services
- Integrating auto-discovery, monitoring and other data sources into a common system

The workshop will be interactive and informal with the presenters willing to help with delegate questions.

If you want to know the easy ways to create and maintain IT infrastructure documentation then this event will give you ideas, options and a good awareness of what is possible.

The Venue – British Computer Society, London HQ

The event will be held at BCS London offices in Southampton Street, between the Strand and Covent Garden. A buffet lunch will be provided after the workshop.

Please register by faxing this page or by using the web site contact form.
